

NE Gravel - 2100

Was a solid landfill - closed May 23, 1973
Started in 1966 -

New owners (since 1969) - ^{still} P.E. Gravel but owners
changed

Handled household refuse

Handled sludges just north of LF site

They were buried as well. (1971 or 2 to 1975 or 6)

They were dewatered before they got to site

Covered acc. to DNR specs.

Wolverine Worldwide produced sludges -
produce Husk puppies. Sludge was fats
& tanning from leather scraping.

Closest wells are at Leisure Village
or on 4 mile Road (3 1/4 mi?)

Still sample wells - no problems so far

Unh amt. 15 to 20' deep trenches

Phone conversation with Sharon Nowlin MDMR Lansing

3/4/85 (517) 373-4800

Northeast Gravel. 8303-03A 8403-15 282

Sharon said the best guess estimate of waste in the landfill based on disturbed ~~soil~~ surface is 7.5×10^4 Kg with a 50-50 split domestic and industrial. No one in the district office Roger Przybylski or Jerry Keyt know the waste quantity. The consultants for Northeast Gravel Freshbeck Thompson Can & Huber also do not know the waste quantity just that it is there.

~~The~~ Sharon said the district did not seem to think that Wolverine Worldwide 12,000 yd³ of sludge was not hazardous.

No good analytical data showing observed groundwater release was ever found.

Kathy C. McCormack

Phone conversation with Roger Pryzborski MNR Grand Rapids

3/4/85 616-456-5071

Northeast Dravel 8303-03A 8403-15 782

Roger did not have any documentation saying the quantity of hazardous waste disposed of by Approved Industrial at Northeast gravel.

Wolverine Worldwide sludges are no going to a type 2 landfill so they are not considered hazardous.

Kathy A. McCormack

There are 6 monitoring wells (or were) at the site. 5 Monitoring wells were around the Wolverine Worldwide sludge area and one monitoring well just 200' S-SW of the cells that Approved Industrial disposed liquid waste.
